“The team has managed and addressed all requested requirement changes and unforeseen delays while strictly adhering to VA guidelines”

VA COR

“Contractor has met the established schedule for all deliverables or completed items early. Contractor has on several occasions provided work on a short turn-around.”

VA COR

“Staff have higher level of expertise in technical areas of contract than anticipated, which is a significant benefit to the government.”

VA COR

Agile Digital Transformation

At VetsEZ, we help identify outdated processes and legacy technology, and replace them with the latest technologies permitting access to updated digital products, services, and business operating models. Our approach defines the process for planning, creating, monitoring and controlling changes to reach approved requirements baselines. We provide full traceability between requirements, test cases and test results. Using Agile Digital Transformation, VetsEZ is able to supply Application Management and Development, and Business Solutions Delivery.

Cybersecurity Solutions

We place a high priority on keeping our client's data secure. We supply

Information Security solutions are carefully designed and managed to protect data from unauthorized access and modification. We manage the process of capturing and storing the data, and control the privileges and methods for access. VetsEZ continually monitors the process and enforces the identified access policies and directives. Our cybersecurity experts provide new recommendations based on relevant industry guidelines to ensure continued protection of our client's data.

Data Management, Analytics, & Business Intelligence

VetsEZ Data Management services help our clients plan and implement optimized, enterprise-level data management plans that account for governance, stewardship, architecture, security and integrity, backup and recovery, restoration and disposal services. Our Subject

Matter Experts (SMEs) utilize industry leading tools and technologies to find trends and meaningful correlations that generate broader, richer knowledge than the data alone. Our clients leverage this information to make strategic decisions that improve the organization's performance and the bottom line.

Portfolio, Program, & Project Management

Our corporate certification of service delivery processes, as compliant with ISO 9001, ISO 20000-1 and ISO 27001:2013, establishes critical performance parameters (CPPs) to measure service delivery cost, quality, risk, and schedule performance. Additionally, VetsEZ has been appraised with the Capability Maturity Model Integration (CMMI) Dev Level 3 industry certification. These certifications establish

frameworks for, and demonstrate our ability to, deliver consistent, high-quality Technology Business Management services. Our standard practices also align with best practices defined by the Project Management Institute's (PMI) Project Management Body of Knowledge (PMBOK), which ensure repeatability, scalability and quality deliverables and services.

COTS and SaaS Enterprise Implementation and Integration

The VetsEZ Team provides extensive, proven competencies in integration, COTS implementations, SaaS implementations, and Service-Oriented Architecture (SOA) deployment topologies. With a critical focus in the interoperability of systems, VetsEZ is able provide quality IT Governance services.
